www.maxirack.com.au

maxiRACK ute racks have been manufactured by Jaram since 1975.

maxiRACK is structurally designed for the heavy duty end of the industry. Expert design and cleverly engineered bracing principles reduce the overall rack weight, maximising it's carrying capacity.

Single Cab Well Body MR AL01

Heavy duty commercial rack that runs from rear of vehicle to the windscreen. Available for both drop side well body utes.

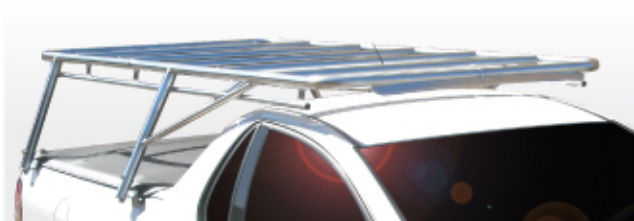

Tray Back Single Cab MR AL02

Very heavy duty commercial rack made from steel or aluminium. Rack runs from rear of the vehicle to front of the windscreen. Available for drop side well body utes.

Well Body Dual Cab MR AL03

Very heavy duty commercial rack made from steel or aluminium. The rack runs from the rear of the vehicle to approximately half the cab length.

Flat Top MR AL04

Heavy duty commercial rack that has no side rails allowing greater load carrying flexibility for items such as gyprock sheeting. Strong tie down rails.

Dual Cab Well Body MR AL07

Heavy duty commercial rack runs from rear of the vehicle to windscreen. Is engineered to support cab overhang so no attachment to cab is required. Available for both drop side and well body utes. The design allows for independent movement of cab and tray.

Profiled Canopy Frame CF 01

Peaked centre assists water run off and rear mounting uprights profiled so canvas fits flush with outside of tray. Specially rolled corners on each side provide a gentle curve which protects the canvas from unnecessary wear and tear and give a quality profiled appearance. Can be built to take convenient load carrying cross bars or the **maxiRACK** as shown on this brochure.

Over Fibreglass Canopy

maxiRACK can be manufactured to fit over fibreglass canopies. However, it must be mentioned that if the vehicle has a canopy, this may effect pricing.

Load Runner the Premium Aluminium Ute Rack!

Designed to blend elegantly with the flowing lines of your vehicle, This low profile ute rack gives an air of sophistication and provides visual balance to your vehicle.

Unique Design:

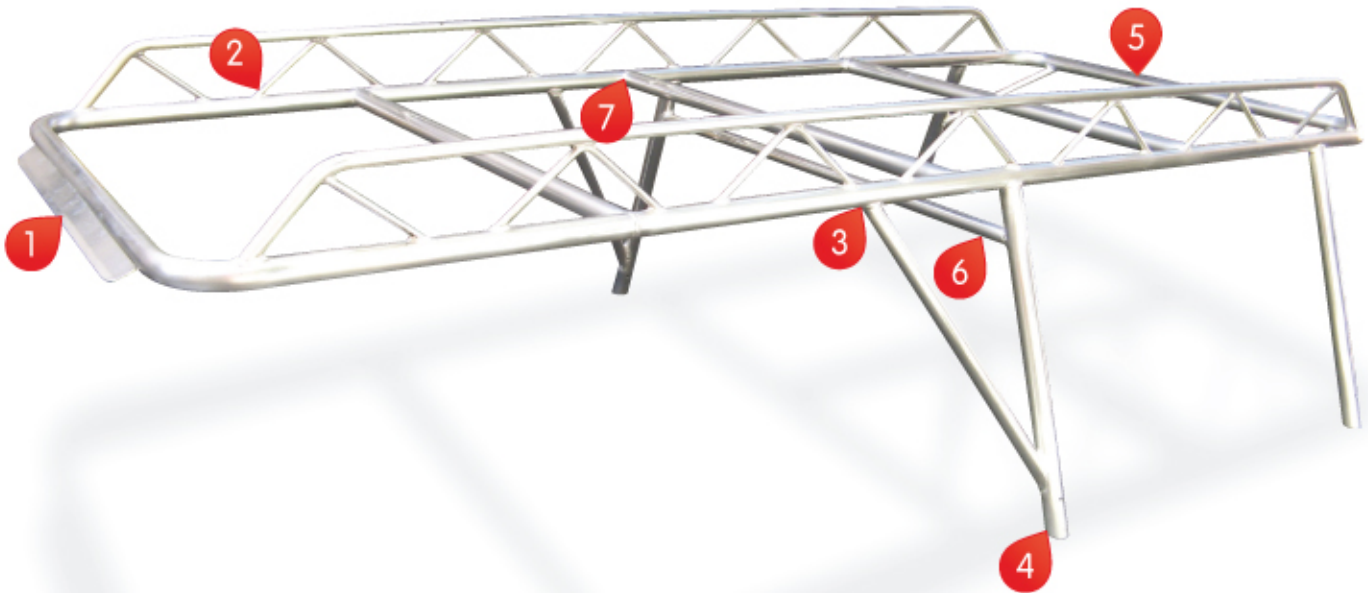

Stunning Looks, high polish finish and smooth surface makes **Load Runner** easy to maintain.

Protection for your vehicle:

Tried and proven bolt on brackets support the rack and the load without damaging your vehicle.

Incredible strength:

Load Runner has unique side flats which provide additional strength to the rack over the whole length.

Benefits of the maxiRACK

- | | |
|--|--|
| 1 Quiet Travel | Creates a smoother cut through the air reducing potential wind noise |
| 2 Carry More- Safely | V-Bracing is used to reinforce the rack as it is the strongest form of bracing. V-bracing is the most effective way of maintaining the strength and integrity of the rack. |
| 3 Not Easily Damaged | All Joints are profiled to give maximum strength and a professional finish. |
| 4 Protection For Your Vehicle | Attaching your maxiRACK to your vehicle incorporates a unique and flexible bolt on mechanism. This means, the rack remains flexible and will move with the stresses of the vehicle and load being carried. |
| 5 Light Weight, but strong | Heavy duty aluminium construction (steel available on request). |
| 6 Stable While Carrying Heavy Loads | Vehicle specific bracing is used to maximise the strength of the rack. |
| 7 Made For Standard Sheets | maxiRACK is made to handle standard 1220mm wide sheets between the side rails (can be further customised). |
