

THE ROOF RACK PERFECTED

STRONGER • QUIETER • BETTER

KORAK

STRONGER • QUIETER • BETTER

Lower, lighter and more aerodynamic, flat-deck roof racks are the smart alternative.

Now there's an even better choice – the K9 Rak.

A true expedition-strength roof rack, the K9 Rak employs a fully-welded aluminium deck with cross-braced longitudinal slats for greater support and carrying capacity.

Built around aero-section aluminium extrusions, and with built-in harmonic damping thanks to the cross-bracing, the longitudinal front-to-back slat arrangement significantly reduces noise and drag.

Each slat incorporates twin slots which accept movable bolts giving the K9 Rak far greater mounting versatility than other flat-deck racks – it'll even accept most other brands' accessories.

The K9 Rak isn't just stronger and quieter than other flat-deck racks – it's also lower. With low-profile aero section extrusions and a close-fitting mounting system, K9 Rak gives you more clearance and even better looks.

AERO-SECTION ALUMINIUM EXTRUSIONS FOR REDUCED NOISE AND WIND RESISTANCE
